Biological Agent Reference Sheet (BARS)

This content of this document is for Emory University USE ONLY.

The information and contents of this Biological Agent Reference Sheet (including all text and graphics), whether available in print or electronic format (including any digital format, e-mail transmissions, or download from the website), shall be known hereinafter as "Reference Sheet Content". The Reference Sheet Content is provided as a courtesy and is not intended as a sole source of guidance in the evaluation of Biological Agents. The Reference Sheet Content is not intended to substitute for medical advice, medical care, diagnosis or treatment obtained from a physician or health care provider. Please seek the advice of a physician or other qualified health provider with any questions you may have regarding a medical condition. Do not rely on the Reference Sheet Content for diagnosis, treatment, or medical advice. This Reference Sheet Content is for informational purposes and does not provide individualized medical care or treatment. No endorsement of any specific tests, products, or procedures is made by Reference Sheet Content or affiliated party, member, agent or employee of the Emory University Environmental Health and Safety Office.

BIOLOGICAL AGENT REFERENCE SHEET

Complete Freund's Adjuvant (CFA)

CHARACTERIS	TICS		
Description	CFA is an immunological agent that increases the antigenic response. It is composed of inactivated and lyophilized mycobacteria (typically <i>Mycobacterium tuberculosis</i>), mineral oil and mannide monooleate.		
HEALTH HAZARDS TO RESEARCH PERSONNEL			
Routes of	Accidental injection, ocular exposure, and dermal		
Exposure	exposure.		
Signs and Symptoms	 <u>Accidental injection:</u> <u>Acute illness</u>: severe swelling, granulomatous inflammation, pain, lesions, abscesses, necrosis, and ulceration of tissues at injection site. Skin maladies and severe pain may persist for years following the exposure incident. Influenza-like symptoms may persist for weeks post exposure. <u>Chronic illness</u>: persistent fever, neurological abnormalities, tuberculoid granulomas, and arthritis. Some cases of permanent organ damage, incurable autoimmune disease and chronic disease potentiating live <i>Mycobacterium tuberculosis</i> following accidental injection have been reported. <u>Ocular exposure</u>: Severe irritation, scar tissue formation, and temporary/permanent vision impairment <u>Dermal exposure</u>: hypersensitivity and interference with the Mantoux test following repeated skin exposure. 		
MEDICAL PREC	CAUTIONS / TREATMENT		
Treatment	 Not responsive to antibiotic therapy. Skin injuries with a reaction can be treated with steroids. 		
Surveillance	Baseline TB test and consider annual Mantoux testing.		
Emory Requirements	Prior to using CFA, consider alternatives. Adhere to IACUC's Policy on CFA use (see <i>Supplemental</i> <i>References</i>). Report all exposures. Also see the <u>Guidelines for Working with Complete Freund's</u> <u>Adjuvant</u> on the EHSO website.		
LABORATORY	HAZARDS		
Tasks	Mixing emulsions, preparation of doses, injection of		
Associated with			
Exposure	bedding materials.		
Handling	Avoid inhalation, contact with skin, eyes, and clothing, and prolonged or repeated exposure.		
Storage	Keep tightly closed when not in use. Store at temperatures between 2 and 8°C. Avoid strong oxidizing agents.
